

## DNR Appendix F - Section Specific Comment 124:

### Comment:

Table 4-2, Summary of Chemical Toxicity Screen for Surface Soil, page 6 - Some of the risk-based industrial screening values presented in this table do not correspond to the current regional screening levels (RSLs). For example, the screening value for arsenic is 2.0E+2 milligram per kilogram (2.0E+2 mg/kg), where the carcinogenic RSL is 1.6E+0 mg/kg, and the non-carcinogenic (NC) value is 2.6E+2 mg/kg. Given the noncarcinogenic screening value should be factored by 0.1 to adjust for additivity of risk, the NC adjusted RSL is 26 mg/kg. RSLs can be found on the internet using the EPA URL: <http://www.epa.gov/reg3hwmd/risk/human/index.htm>. Please note that all site-related contaminants, not just previously-identified chemicals of potential concern (COPC), should be compared to the RSLs.

### Discussion:

The screening table has been updated using information available on February 19, 2011.

### Proposed Text Change:

Section 4.2.1.2 has been revised and now reads:

“Chemicals of Concern

The BRA also performed a toxicity screen of the chemicals that were reported at the Site. This toxicity screen has been updated to account for changes that have occurred since publication of the BRA. Table 4-2 presents the concentrations used in the screening evaluation and the results.”

EPA FEEDBACK:

EPA accepts this response and the proposed text change.

**1 Table 4-2 Summary of Chemical Toxicity Screen for Surface Soil**

Analyte	Risk- or HI- Based Industrial Screening Values <sup>a</sup> (mg/kg)	Maximum Soil Concentrations <sup>b</sup>		Selection/Screening of COCs in Soils <sup>c</sup>		Screening Result Changed from Baseline?
		Area 1 (mg/kg)	Area 2 + Boundary (mg/kg)	Area 1 0-1 ft	Area 2 + Boundary 0-1 ft	
Inorganic Chemicals						
Arsenic	1.60x10 <sup>00</sup>	220	35	YES	YES	no
Beryllium	2.00x10 <sup>03</sup>	3.3	2.2 <sup>f</sup>	no	no	no
Cadmium	8.00x10 <sup>02</sup>	7.9	6.3 <sup>f</sup>	no	no	no
Chromium (VI)	5.60x10 <sup>00</sup>	31	49 <sup>f</sup>	YES	YES	Added
Copper	4.10x10 <sup>04</sup>	2,300	360	no	no	no
Lead	8.00x10 <sup>02</sup>	320	2,200	no	YES	no

Mercury	3.40x10 <sup>01</sup>	0.17	0.27	no	no	no
Nickel	2.00x10 <sup>04</sup>	3,600	680	no	no	no
Selenium	5.10x10 <sup>03</sup>	250	38	no	no	no
Thallium	1.40x10 <sup>01 d</sup>	1.2	nr <sup>e</sup>	no	no	no
Uranium	3.10x10 <sup>03</sup>	437.5	875	no	no	<b>Deleted</b>
Zinc	3.10x10 <sup>05</sup>	120	400 <sup>f</sup>	no	no	no
<b>Organic Chemicals</b>						
Acetone	6.30x10 <sup>05</sup>	0.034	0.038	no	no	no
Bis(2-ethylhexyl) phthalate	1.20x10 <sup>02</sup>	7.8	77	no	no	no
Di-n-octylphthalate	1.80x10 <sup>03 d</sup>	3	12	no	no	no
1,4-Dichlorobenzene	1.20x10 <sup>01</sup>	0.042	0.0065	no	no	no
Fluoranthene	2.20x10 <sup>04</sup>	nr	8.5	no	no	no
Xylenes	2.70x10 <sup>03</sup>	0.037	0.012	no	no	no
<b>Pesticides/PCBs</b>						
Aldrin	1.00x10 <sup>-01</sup>	nr	0.0017	no	no	no
Aroclor-1254	7.40x10 <sup>-01</sup>	1.1	1.6	<b>YES</b>	<b>YES</b>	no
4,4'-DDD	7.20x10 <sup>00 d</sup>	nr	0.0076	no	no	no
4,4'-DDT	7.00x10 <sup>00</sup>	nr	0.0094	no	no	no

<sup>a</sup> Unless otherwise noted, values are from [http://www.epa.gov/reg3hwmd/risk/human/rb-concentration\\_table/Generic\\_Tables/](http://www.epa.gov/reg3hwmd/risk/human/rb-concentration_table/Generic_Tables/), February 21, 2011. When carcinogenic (risk) and non-carcinogenic (hazard) based screening levels were given for a constituent, the lower of the two was selected.

<sup>b</sup> From Table A.2-1 of the BRA (Auxier 2000)

<sup>c</sup> "YES" signifies that the analyte was selected for quantitative risk evaluation, "no" signifies that analyte was not selected for quantitative risk evaluation.

<sup>d</sup> Value from BRA, no updated information identified.

<sup>e</sup> nr = not reported

<sup>f</sup> Measured on the former Ford property (current Buffer Zone and Crossroad Lot 2A2 properties) before surface grading were performed by the adjacent property owner.

Chromium VI has been added to the list of COCs because its maximum reported concentration exceeds the current published screening level of 5.6 mg/kg.<sup>1</sup> The current screening level published for elemental uranium has increased since publication of the BRA. The maximum concentration of elemental uranium is now below the current EPA Regional Screening Level of 3,100 mg/kg and elemental uranium has been removed from non-carcinogenic evaluations (individual isotopes of uranium remain as COCs because they are radiocarcinogens)."
